

POWER Software Consultants
Request to Activate Expanded Control

Our dealership is requesting the Expanded Control Number feature be activated. Our client number is _____.

Please also make the above changes for the following client numbers (if applicable): _____, _____,
_____, _____, _____, _____, _____.

Activation of the Expanded Control Number feature requires the use of POWER Workstation for all accounting functions. Since Expanded Control Number capabilities only exist in POWER Workstation, activation of the feature will restrict access to Management Accounting programs in PC Attach. This restricted access includes access to the Purchase Order application (Program 338).

Note: Once the feature is activated, 25-character reference, control, and dual control number entries are available. As a result, the feature cannot be deactivated as these posted entries could not be 'cleared' for schedule purposes.

Additionally, activation of the feature automatically modifies Management Accounting display screen and report settings to ensure full 25-character reference, control, and dual control numbers are displayed. Utilized display screens and reports should be reviewed and further customized as needed to match the needs of the dealership.

I understand the reflexes of activating the Expanded Control Number feature and would like to have the feature activated.
